Helios Platform Engineering Manual (Synthetic, 60 pages)

Document ID: EDGE-004 | Department: ENGINEERING | Category: MANUAL | Synthetic load-test document

Chapter 1: Service module 01

Module 01 section 1. The service module 01 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1001.

Module 01 section 2. The service module 01 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1001.

Module 01 section 3. The service module 01 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1001.

Module 01 section 4. The service module 01 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1001.

Module 01 section 5. The service module 01 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1001.

Chapter 2: Service module 02

Module 02 section 1. The service module 02 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1002.

Module 02 section 2. The service module 02 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1002.

Module 02 section 3. The service module 02 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1002.

Module 02 section 4. The service module 02 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1002.

Module 02 section 5. The service module 02 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1002.

Chapter 3: Service module 03

Module 03 section 1. The service module 03 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1003.

Module 03 section 2. The service module 03 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1003.

Module 03 section 3. The service module 03 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1003.

Module 03 section 4. The service module 03 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1003.

Module 03 section 5. The service module 03 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1003.

Chapter 4: Service module 04

Module 04 section 1. The service module 04 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1004.

Module 04 section 2. The service module 04 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1004.

Module 04 section 3. The service module 04 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1004.

Module 04 section 4. The service module 04 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1004.

Module 04 section 5. The service module 04 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1004.

Chapter 5: Service module 05

Module 05 section 1. The service module 05 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1005.

Module 05 section 2. The service module 05 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1005.

Module 05 section 3. The service module 05 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1005.

Module 05 section 4. The service module 05 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1005.

Module 05 section 5. The service module 05 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1005.

Chapter 6: Service module 06

Module 06 section 1. The service module 06 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1006.

Module 06 section 2. The service module 06 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1006.

Module 06 section 3. The service module 06 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1006.

Module 06 section 4. The service module 06 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1006.

Module 06 section 5. The service module 06 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1006.

Chapter 7: Service module 07

Module 07 section 1. The service module 07 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1007.

Module 07 section 2. The service module 07 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1007.

Module 07 section 3. The service module 07 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1007.

Module 07 section 4. The service module 07 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1007.

Module 07 section 5. The service module 07 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1007.

Chapter 8: Service module 08

Module 08 section 1. The service module 08 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1008.

Module 08 section 2. The service module 08 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1008.

Module 08 section 3. The service module 08 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1008.

Module 08 section 4. The service module 08 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1008.

Module 08 section 5. The service module 08 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1008.

Chapter 9: Service module 09

Module 09 section 1. The service module 09 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1009.

Module 09 section 2. The service module 09 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1009.

Module 09 section 3. The service module 09 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1009.

Module 09 section 4. The service module 09 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1009.

Module 09 section 5. The service module 09 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1009.

Chapter 10: Service module 10

Module 10 section 1. The service module 10 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1010.

Module 10 section 2. The service module 10 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1010.

Module 10 section 3. The service module 10 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1010.

Module 10 section 4. The service module 10 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1010.

Module 10 section 5. The service module 10 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1010.

Chapter 11: Service module 11

Module 11 section 1. The service module 11 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1011.

Module 11 section 2. The service module 11 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1011.

Module 11 section 3. The service module 11 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1011.

Module 11 section 4. The service module 11 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1011.

Module 11 section 5. The service module 11 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1011.

Chapter 12: Service module 12

Module 12 section 1. The service module 12 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1012.

Module 12 section 2. The service module 12 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1012.

Module 12 section 3. The service module 12 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1012.

Module 12 section 4. The service module 12 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1012.

Module 12 section 5. The service module 12 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1012.

Chapter 13: Service module 13

Module 13 section 1. The service module 13 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1013.

Module 13 section 2. The service module 13 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1013.

Module 13 section 3. The service module 13 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1013.

Module 13 section 4. The service module 13 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1013.

Module 13 section 5. The service module 13 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1013.

Chapter 14: Service module 14

Module 14 section 1. The service module 14 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1014.

Module 14 section 2. The service module 14 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1014.

Module 14 section 3. The service module 14 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1014.

Module 14 section 4. The service module 14 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1014.

Module 14 section 5. The service module 14 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1014.

Chapter 15: Service module 15

Module 15 section 1. The service module 15 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1015.

Module 15 section 2. The service module 15 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1015.

Module 15 section 3. The service module 15 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1015.

Module 15 section 4. The service module 15 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1015.

Module 15 section 5. The service module 15 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1015.

Chapter 16: Service module 16

Module 16 section 1. The service module 16 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1016.

Module 16 section 2. The service module 16 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1016.

Module 16 section 3. The service module 16 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1016.

Module 16 section 4. The service module 16 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1016.

Module 16 section 5. The service module 16 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1016.

Chapter 17: Service module 17

Module 17 section 1. The service module 17 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1017.

Module 17 section 2. The service module 17 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1017.

Module 17 section 3. The service module 17 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1017.

Module 17 section 4. The service module 17 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1017.

Module 17 section 5. The service module 17 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1017.

Chapter 18: Service module 18

Module 18 section 1. The service module 18 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1018.

Module 18 section 2. The service module 18 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1018.

Module 18 section 3. The service module 18 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1018.

Module 18 section 4. The service module 18 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1018.

Module 18 section 5. The service module 18 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1018.

Chapter 19: Service module 19

Module 19 section 1. The service module 19 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1019.

Module 19 section 2. The service module 19 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1019.

Module 19 section 3. The service module 19 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1019.

Module 19 section 4. The service module 19 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1019.

Module 19 section 5. The service module 19 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1019.

Chapter 20: Service module 20

Module 20 section 1. The service module 20 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1020.

Module 20 section 2. The service module 20 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1020.

Module 20 section 3. The service module 20 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1020.

Module 20 section 4. The service module 20 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1020.

Module 20 section 5. The service module 20 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1020.

Chapter 21: Service module 21

Module 21 section 1. The service module 21 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1021.

Module 21 section 2. The service module 21 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1021.

Module 21 section 3. The service module 21 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1021.

Module 21 section 4. The service module 21 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1021.

Module 21 section 5. The service module 21 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1021.

Chapter 22: Service module 22

Module 22 section 1. The service module 22 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1022.

Module 22 section 2. The service module 22 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1022.

Module 22 section 3. The service module 22 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1022.

Module 22 section 4. The service module 22 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1022.

Module 22 section 5. The service module 22 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1022.

Chapter 23: Service module 23

Module 23 section 1. The service module 23 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1023.

Module 23 section 2. The service module 23 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1023.

Module 23 section 3. The service module 23 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1023.

Module 23 section 4. The service module 23 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1023.

Module 23 section 5. The service module 23 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1023.

Chapter 24: Service module 24

Module 24 section 1. The service module 24 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1024.

Module 24 section 2. The service module 24 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1024.

Module 24 section 3. The service module 24 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1024.

Module 24 section 4. The service module 24 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1024.

Module 24 section 5. The service module 24 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1024.

Chapter 25: Service module 25

Module 25 section 1. The service module 25 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1025.

Module 25 section 2. The service module 25 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1025.

Module 25 section 3. The service module 25 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1025.

Module 25 section 4. The service module 25 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1025.

Module 25 section 5. The service module 25 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1025.

Chapter 26: Service module 26

Module 26 section 1. The service module 26 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1026.

Module 26 section 2. The service module 26 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1026.

Module 26 section 3. The service module 26 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1026.

Module 26 section 4. The service module 26 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1026.

Module 26 section 5. The service module 26 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1026.

Chapter 27: Service module 27

Module 27 section 1. The service module 27 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1027.

Module 27 section 2. The service module 27 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1027.

Module 27 section 3. The service module 27 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1027.

Module 27 section 4. The service module 27 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1027.

Module 27 section 5. The service module 27 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1027.

Chapter 28: Service module 28

Module 28 section 1. The service module 28 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1028.

Module 28 section 2. The service module 28 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1028.

Module 28 section 3. The service module 28 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1028.

Module 28 section 4. The service module 28 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1028.

Module 28 section 5. The service module 28 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1028.

Chapter 29: Service module 29

Module 29 section 1. The service module 29 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1029.

Module 29 section 2. The service module 29 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1029.

Module 29 section 3. The service module 29 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1029.

Module 29 section 4. The service module 29 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1029.

Module 29 section 5. The service module 29 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1029.

Chapter 30: Service module 30

Module 30 section 1. The service module 30 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1030.

Module 30 section 2. The service module 30 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1030.

Module 30 section 3. The service module 30 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1030.

Module 30 section 4. The service module 30 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1030.

Module 30 section 5. The service module 30 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1030.

Chapter 31: Service module 31

Module 31 section 1. The service module 31 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1031.

Module 31 section 2. The service module 31 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1031.

Module 31 section 3. The service module 31 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1031.

Module 31 section 4. The service module 31 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1031.

Module 31 section 5. The service module 31 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1031.

Chapter 32: Service module 32

Module 32 section 1. The service module 32 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1032.

Module 32 section 2. The service module 32 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1032.

Module 32 section 3. The service module 32 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1032.

Module 32 section 4. The service module 32 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1032.

Module 32 section 5. The service module 32 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1032.

Chapter 33: Service module 33

Module 33 section 1. The service module 33 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1033.

Module 33 section 2. The service module 33 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1033.

Module 33 section 3. The service module 33 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1033.

Module 33 section 4. The service module 33 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1033.

Module 33 section 5. The service module 33 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1033.

Chapter 34: Service module 34

Module 34 section 1. The service module 34 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1034.

Module 34 section 2. The service module 34 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1034.

Module 34 section 3. The service module 34 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1034.

Module 34 section 4. The service module 34 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1034.

Module 34 section 5. The service module 34 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1034.

Chapter 35: Service module 35

Module 35 section 1. The service module 35 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1035.

Module 35 section 2. The service module 35 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1035.

Module 35 section 3. The service module 35 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1035.

Module 35 section 4. The service module 35 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1035.

Module 35 section 5. The service module 35 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1035.

Chapter 36: Service module 36

Module 36 section 1. The service module 36 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1036.

Module 36 section 2. The service module 36 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1036.

Module 36 section 3. The service module 36 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1036.

Module 36 section 4. The service module 36 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1036.

Module 36 section 5. The service module 36 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1036.

Chapter 37: Service module 37

Module 37 section 1. The service module 37 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1037.

Module 37 section 2. The service module 37 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1037.

Module 37 section 3. The service module 37 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1037.

Module 37 section 4. The service module 37 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1037.

Module 37 section 5. The service module 37 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1037.

Chapter 38: Service module 38

Module 38 section 1. The service module 38 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1038.

Module 38 section 2. The service module 38 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1038.

Module 38 section 3. The service module 38 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1038.

Module 38 section 4. The service module 38 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1038.

Module 38 section 5. The service module 38 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1038.

Chapter 39: Service module 39

Module 39 section 1. The service module 39 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1039.

Module 39 section 2. The service module 39 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1039.

Module 39 section 3. The service module 39 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1039.

Module 39 section 4. The service module 39 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1039.

Module 39 section 5. The service module 39 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1039.

Chapter 40: Service module 40

Module 40 section 1. The service module 40 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1040.

Module 40 section 2. The service module 40 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1040.

Module 40 section 3. The service module 40 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1040.

Module 40 section 4. The service module 40 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1040.

Module 40 section 5. The service module 40 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1040.

Chapter 41: Service module 41

Module 41 section 1. The service module 41 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1041.

Module 41 section 2. The service module 41 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1041.

Module 41 section 3. The service module 41 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1041.

Module 41 section 4. The service module 41 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1041.

Module 41 section 5. The service module 41 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1041.

Chapter 42: Service module 42

Module 42 section 1. The service module 42 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1042.

Module 42 section 2. The service module 42 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1042.

Module 42 section 3. The service module 42 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1042.

Module 42 section 4. The service module 42 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1042.

Module 42 section 5. The service module 42 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1042.

Chapter 43: Service module 43

Module 43 section 1. The service module 43 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1043.

Module 43 section 2. The service module 43 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1043.

Module 43 section 3. The service module 43 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1043.

Module 43 section 4. The service module 43 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1043.

Module 43 section 5. The service module 43 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1043.

Chapter 44: Service module 44

Module 44 section 1. The service module 44 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1044.

Module 44 section 2. The service module 44 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1044.

Module 44 section 3. The service module 44 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1044.

Module 44 section 4. The service module 44 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1044.

Module 44 section 5. The service module 44 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1044.

Chapter 45: Service module 45

Module 45 section 1. The service module 45 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1045.

Module 45 section 2. The service module 45 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1045.

Module 45 section 3. The service module 45 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1045.

Module 45 section 4. The service module 45 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1045.

Module 45 section 5. The service module 45 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1045.

Chapter 46: Service module 46

Module 46 section 1. The service module 46 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1046.

Module 46 section 2. The service module 46 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1046.

Module 46 section 3. The service module 46 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1046.

Module 46 section 4. The service module 46 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1046.

Module 46 section 5. The service module 46 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1046.

Chapter 47: Service module 47

Module 47 section 1. The service module 47 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1047.

Module 47 section 2. The service module 47 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1047.

Module 47 section 3. The service module 47 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1047.

Module 47 section 4. The service module 47 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1047.

Module 47 section 5. The service module 47 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1047.

Chapter 48: Service module 48

Module 48 section 1. The service module 48 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1048.

Module 48 section 2. The service module 48 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1048.

Module 48 section 3. The service module 48 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1048.

Module 48 section 4. The service module 48 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1048.

Module 48 section 5. The service module 48 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1048.

Chapter 49: Service module 49

Module 49 section 1. The service module 49 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1049.

Module 49 section 2. The service module 49 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1049.

Module 49 section 3. The service module 49 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1049.

Module 49 section 4. The service module 49 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1049.

Module 49 section 5. The service module 49 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 3 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1049.

Chapter 50: Service module 50

Module 50 section 1. The service module 50 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1050.

Module 50 section 2. The service module 50 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1050.

Module 50 section 3. The service module 50 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1050.

Module 50 section 4. The service module 50 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1050.

Module 50 section 5. The service module 50 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 4 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1050.

Chapter 51: Service module 51

Module 51 section 1. The service module 51 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1051.

Module 51 section 2. The service module 51 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1051.

Module 51 section 3. The service module 51 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1051.

Module 51 section 4. The service module 51 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1051.

Module 51 section 5. The service module 51 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 5 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1051.

Chapter 52: Service module 52

Module 52 section 1. The service module 52 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1052.

Module 52 section 2. The service module 52 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1052.

Module 52 section 3. The service module 52 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1052.

Module 52 section 4. The service module 52 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1052.

Module 52 section 5. The service module 52 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 2 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1052.

Chapter 53: Service module 53

Module 53 section 1. The service module 53 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1053.

Module 53 section 2. The service module 53 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1053.

Module 53 section 3. The service module 53 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1053.

Module 53 section 4. The service module 53 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1053.

Module 53 section 5. The service module 53 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 3 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1053.

Chapter 54: Service module 54

Module 54 section 1. The service module 54 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1054.

Module 54 section 2. The service module 54 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1054.

Module 54 section 3. The service module 54 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1054.

Module 54 section 4. The service module 54 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1054.

Module 54 section 5. The service module 54 exposes a health endpoint, publishes metrics every 15 seconds, and retries failed calls up to 4 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1054.

Chapter 55: Service module 55

Module 55 section 1. The service module 55 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1055.

Module 55 section 2. The service module 55 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1055.

Module 55 section 3. The service module 55 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1055.

Module 55 section 4. The service module 55 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1055.

Module 55 section 5. The service module 55 exposes a health endpoint, publishes metrics every 16 seconds, and retries failed calls up to 5 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1055.

Chapter 56: Service module 56

Module 56 section 1. The service module 56 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1056.

Module 56 section 2. The service module 56 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1056.

Module 56 section 3. The service module 56 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1056.

Module 56 section 4. The service module 56 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1056.

Module 56 section 5. The service module 56 exposes a health endpoint, publishes metrics every 10 seconds, and retries failed calls up to 2 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1056.

Chapter 57: Service module 57

Module 57 section 1. The service module 57 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1057.

Module 57 section 2. The service module 57 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1057.

Module 57 section 3. The service module 57 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1057.

Module 57 section 4. The service module 57 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1057.

Module 57 section 5. The service module 57 exposes a health endpoint, publishes metrics every 11 seconds, and retries failed calls up to 3 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1057.

Chapter 58: Service module 58

Module 58 section 1. The service module 58 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1058.

Module 58 section 2. The service module 58 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1058.

Module 58 section 3. The service module 58 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1058.

Module 58 section 4. The service module 58 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1058.

Module 58 section 5. The service module 58 exposes a health endpoint, publishes metrics every 12 seconds, and retries failed calls up to 4 times with exponential backoff starting at 200 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1058.

Chapter 59: Service module 59

Module 59 section 1. The service module 59 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1059.

Module 59 section 2. The service module 59 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1059.

Module 59 section 3. The service module 59 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1059.

Module 59 section 4. The service module 59 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1059.

Module 59 section 5. The service module 59 exposes a health endpoint, publishes metrics every 13 seconds, and retries failed calls up to 5 times with exponential backoff starting at 300 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1059.

Chapter 60: Service module 60

Module 60 section 1. The service module 60 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1060.

Module 60 section 2. The service module 60 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1060.

Module 60 section 3. The service module 60 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1060.

Module 60 section 4. The service module 60 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1060.

Module 60 section 5. The service module 60 exposes a health endpoint, publishes metrics every 14 seconds, and retries failed calls up to 2 times with exponential backoff starting at 100 milliseconds. Owners rotate quarterly and the runbook identifier for this module is RB-1060.
